

KENWOOD

"Image Enhancer" technology ushers in a new era of Kenwood speaker development. Based on a patented Kenwood design, the simplicity of the gently curved exterior is not only attractive but also highly functional. All sharp corners are eliminated to prevent adverse sound wave reflection and interference. Even a new grill design is adopted to ensure the full benefit of "Image Enhancer" technology: flatter and wider dispersion of the sound image with noticeable improvement in vocals. Effort has also been made to strengthen bass sound response and achieve higher mid-range efficiency by increasing magnet size. Despite this adoption of thicker magnets, our engineers successfully reduced mounting depth, enabling easy installation in a greater variety of cabin environments. Incorporating superior diaphragm materials that can withstand power output in excess of 1,000 W and featuring innovative enclosures that enhance sound imaging, Kenwood speakers are the perfect match for the power and performance of our advanced car audio systems.

SPEAKERS

TECHNICALITY

IE SPEAKERS

The centerpiece of our 2003 lineup is the new IE speaker series featuring Kenwood's original Image Enhancer technology. While the innovative and aggressive look of these speakers and their distinctive 3-spoke grille are sure to grab attention, the attractive design is actually an integral part of the successful adaptation of Image Enhancer technology for the car audio environment. Delivering vast improvement in vocals as well as incredible sound staging and imaging quality, IE speakers are the new true voice of real sound.

KFC-7189ie

The "Image Enhancer" technology, patented worldwide by Kenwood in 1987, eliminates sharp corners, non-functional moldings and other factors that contribute unwanted sound wave reflection and interference. The result is a flatter and widely dispersed sound image with especially big improvements in the vocal range.

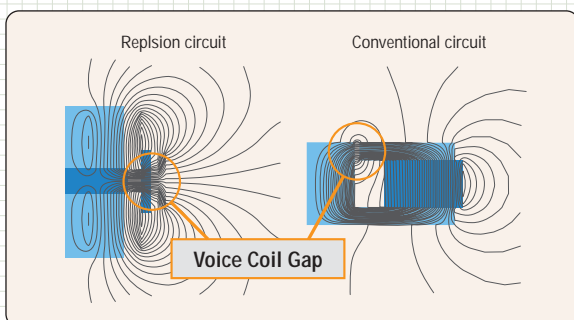

KFC-PSR71P

PSR SPEAKERS

In our quest to create the ultimate audio experience, Kenwood invests its entire treasure of technology. For the highest fidelity sound reproduction possible with superb linearity, the PSR series incorporates DualMags technology to deliver "clean" natural sound to your ears.

High-energy Neodymium magnets and an advanced repulsion magnetic circuit reproduce high-quality sound with a clear midrange and solid bass response. Featuring improved magnetic circuitry, the 4-layer voice coil delivers powerful bass sound with reduced loss of magnetic flux density. The result is reproduction of wide and dynamic sound with greater power throughout the flat frequency spectrum.

The Pearl-Mica Injection-Moulded Cone not only boasts an attractive coloured cone surface but also features extreme rigidity to eliminate unnecessary resonance.

☑ HQ/DB SPEAKERS

In the development of the HQ/DB series, our goal was more dynamic sound. In order to provide both high power handling and rich bass, our attention focused on the rigidity of the cone, and our answer was the adoption of PBO, a superb material that features both light weight and excellent strength.

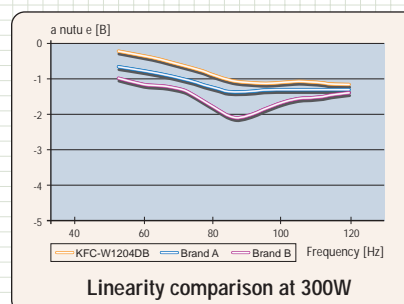

Designed specifically for the delivery of extra-high power of up to 1,000W, the dB+ woofer employs a PBO cone diaphragm that features faster propagation speed and excellent internal loss as well as greater stability. The rubber surround and rigid basket further enhance stability while the spiral vented pole piece and AFC spider greatly improve linearity and efficiency. The same design concept is also applied to the new full-range speakers.

KFC-HQ178 and KFC-HQ138 both employ this awesome PBO cone diaphragm. They also feature an aluminum bobbin voice coil to effectively suppress unwanted resonance while improving heat radiation. With the new dB+ Series of full-range speakers, you can easily bring the experience of high-quality "true" bass into your car.

KFC-HQ178

KFC-HQ138

Increased Magnet Size

Magnet size has been increased in several models to realize better mid-range efficiency and reinforce bass sound response.

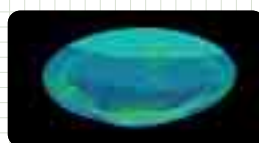

Dual Voice Coil

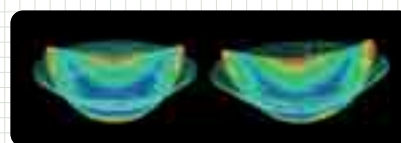

By incorporating two 4Ω voice coils, Dual Voice Coil technology enables the same woofer to be used as a 2Ω or 8Ω impedance unit just by changing the wiring connection. This expanded flexibility gives users the choice to use this unique woofer in a wide variety of combinations and configurations.

☑ WOOFERS

Because car audio lovers demand not only volume but also high quality bass, we have adopted the Kenwood Original Shaped Diaphragm. Newly designed to handle both huge input and large amplitudes, this woofer diaphragm has a unique look to deliver a uniquely great bottom end.

KENWOOD

BRAND A

BRAND B

WOOX SUBWOOFER

Woox Technology is the result of our quest for powerful bass reproduction with a smaller drive unit and enclosure, and KSC-WA62RC is the subwoofer that embodies that technology. Maximum output of the built-in power amplifier is 100 W. With the wired remote control supplied with the unit, the driver can easily adjust input sensitivity and frequency cut-off or use the phase reverse function to ideally tune the subwoofer from comfort of the driver's seat.

KFC-WA62RC

☑ TWEETERS

New package component speakers feature a 5-way mounting tweeter as well as a protection device in the crossover network. Special mounting brackets provide the freedom to flexibly mount the tweeter five different ways: swivel flush, swivel surface, fixed surface, 70° angle and 45° angle. With a swivel angle of 12.5 degrees, this system can deliver optimum high-frequency sound in any car cabin environment. Boasting a new "transparent" look, the crossover network unit has a built-in protection circuit against excess input power.

- Speaker level input
- Mounting belts included for easy installation

TUBE WOOFER WITH REMOTE CONTROL CAPABILITY

The tube-type speaker enclosure reproduces richer bass sound, and the large concave center cap effectively eliminates unwanted distortion. On the rear panel, parallel fins improve heat dissipation of the built-in amp while the Kenwood triangle LED lends an attractive accent to the rear view.

The remote control unit can be detached from the speaker system and operated via a shielded mini-DIN cable.

ADJUSTABLE DIRECTION TWEETER

ADJUST
DIRECTION

Many standard speakers can play high frequencies, but because of where they may be positioned the listener may never hear them. Since high frequency sound is very directive and speakers are not always placed in the best position, it makes a lot of sense to have a tweeter which can be angled towards the listeners ears. Kenwood's HQ-series has introduced Adjustable Direction Tweeter which enables an adjustment between +/- 15 degrees in order to orient direct sound to the listening position.

Custom Fit Speakers

All the speakers you see here are designed to easily slot into the cut-outs of the original units installed at the factory. In most cases, no modification will be needed except perhaps the use of a spacer. These models have no grilles since these should be available as part of the original car interior.
